

Many cities, counties and states as well as the federal government have encouraged green building in public buildings while providing incentives and guidelines for private sector. They advance green building to maximize economic and environmental performance of buildings while reducing impacts on the community and the tax load. Green buildings are energy, land, water and resource efficient, require less operation and maintenance and are healthier places to learn, live and work. Attend and learn what goes into making a building green, examples of green buildings and the types of programs communities are implementing to promote them.

GREEN BUILDING BREAKFAST

Future Solutions Now

April 21, 2004

8:00 – 10:00 a.m.

UW Extension Offices

864 Collins Road Suite 111
Jefferson, WI 53549
Phone (920) 674-8711
Fax (920) 674-7575

Green Building Breakfast

Wednesday, April 21, 2004

8:00 – 10:00 a.m.

Room 8 & 9

UW Extension Offices

864 Collins Road

Jefferson

PROGRAM

- Context of Green Building with other planning and community design initiatives
- LEED™ Green Building Rating System
- Building Green Government Initiatives

OBJECTIVES

By attending this session you will learn:

- What high performance green building is
- How the national Green Building Rating System-LEED™ – Leadership in Energy & Environmental Design, works.
- The context of green building with other planning and community design initiatives and how this relates to smart growth.
- The true costs of buildings over their life and the economics of building green.
- How other municipalities are integrating green building into public and private initiatives.

COST

This is a free seminar sponsored by Jefferson County Economic Development Consortium. Please RSVP by April 14, 2004.
